

Sprint 1 Review Package

Demo Evidence :

Happy path :

Alternative flows :

Use case verification checklist :

- UC-01 Log in to System :

- Valid credentials redirect to the dashboard within 2 seconds. **Pass**
- Invalid credentials show a clear, red error message without page reload. **Pass**

Sprint 1 task audit :

- Sprint 1 goal : Working authentication with both a clean and modern user interface and a properly working api server and database.
- Tasks planned: 7
- Tasks completed : 7
- Tasks not completed: 0
- Biggest blockers (1-3 items, concrete) :
 - Understanding the security concepts used in a login system (JWT Token, OAuth2PasswordRequestForm)

Bug + gap list converted into Sprint 2 tasks :

The server return different error codes depending on the error and for some even a custom message that could be displayed on the user screen.

- Better error message when trying to log in
Owner : Laurick Spahn-Eigner
Definition of Done : message indicate precisely the issue

Mini-retrospective :

We managed to fix all the issues we ran into (very few) and we have reached the sprint 1 goal.

For some member of the group it was their first time using Git and GitHub, but they succeeded in the utilisation of this tool.

We will use more the Trello dashboard now that more informations are on it instead of calling one another everytime.

Sprint 2 plan stub :

Goal : Add the chat system so users can communicate.

Top 5 tasks:

- User interface for chat
- Client – server link for chat
- Websocket server to handle messages
