

Sprint 3 Review Package

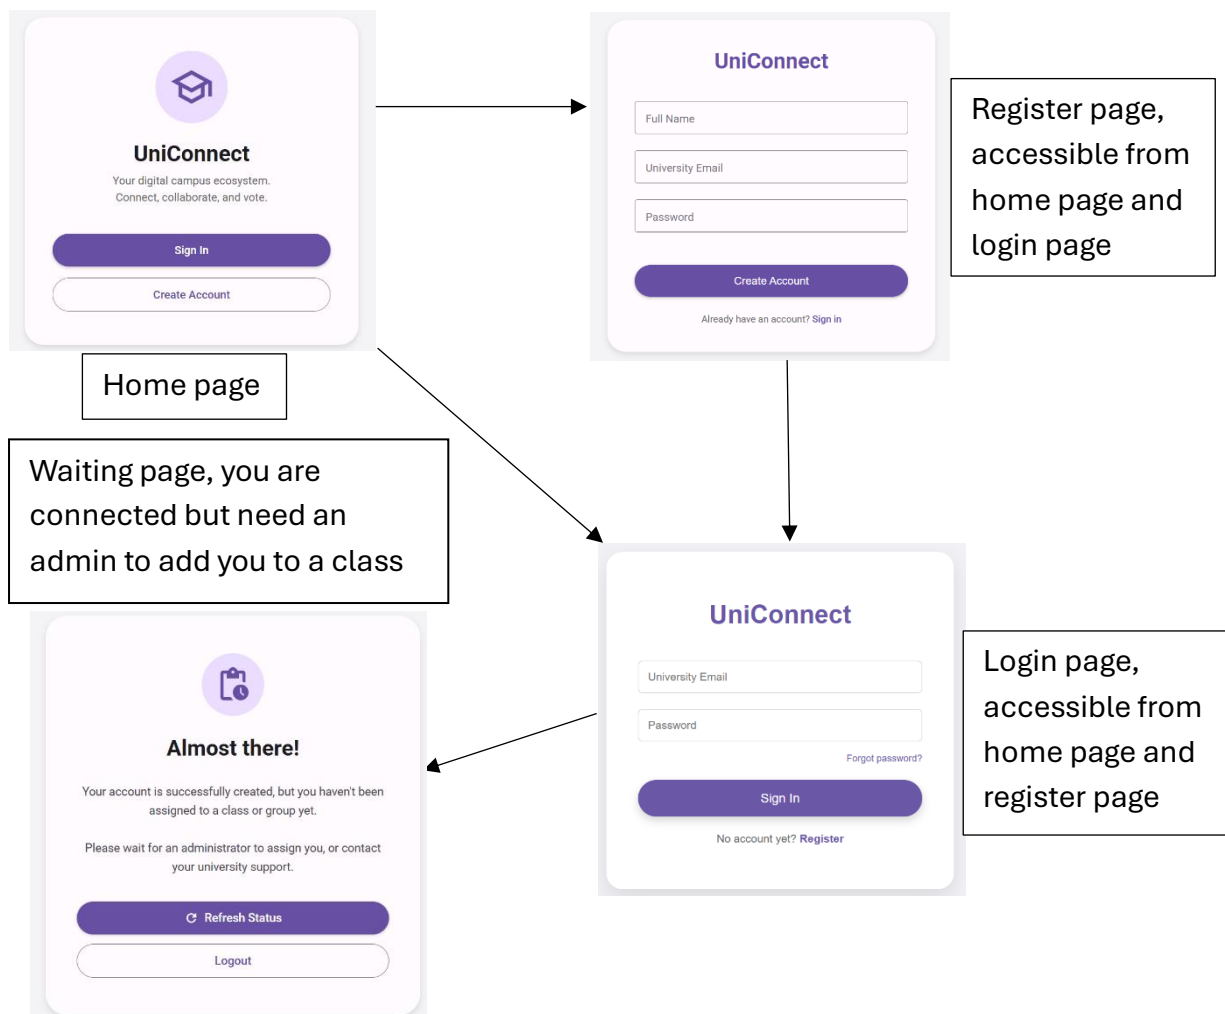

Demo evidence summary:

Our demo shows all 7 use cases, most alternative flow and the multimedia elements appear on every pages

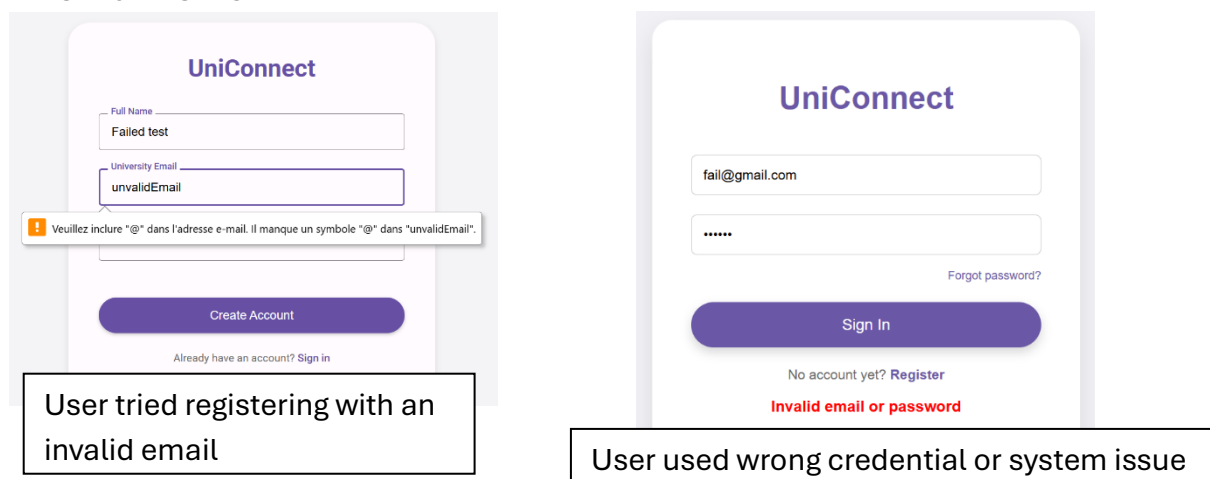

Demo Evidence:

UC-01 Log in to System:

Happy path:

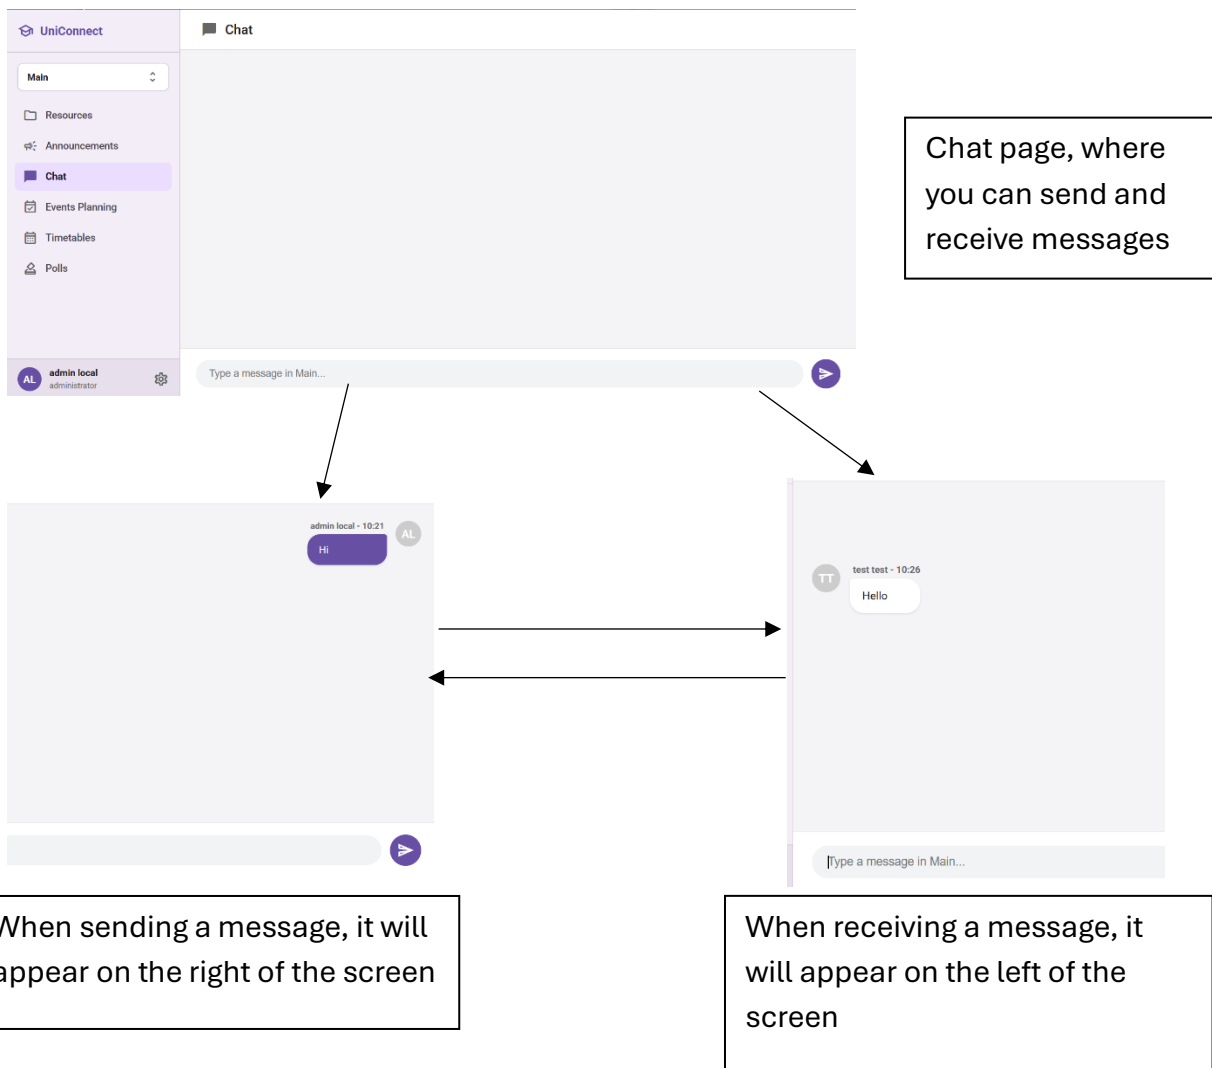

Alternative flow:

UC-02 Send Class Group Message:

Happy path:

Alternative flow:

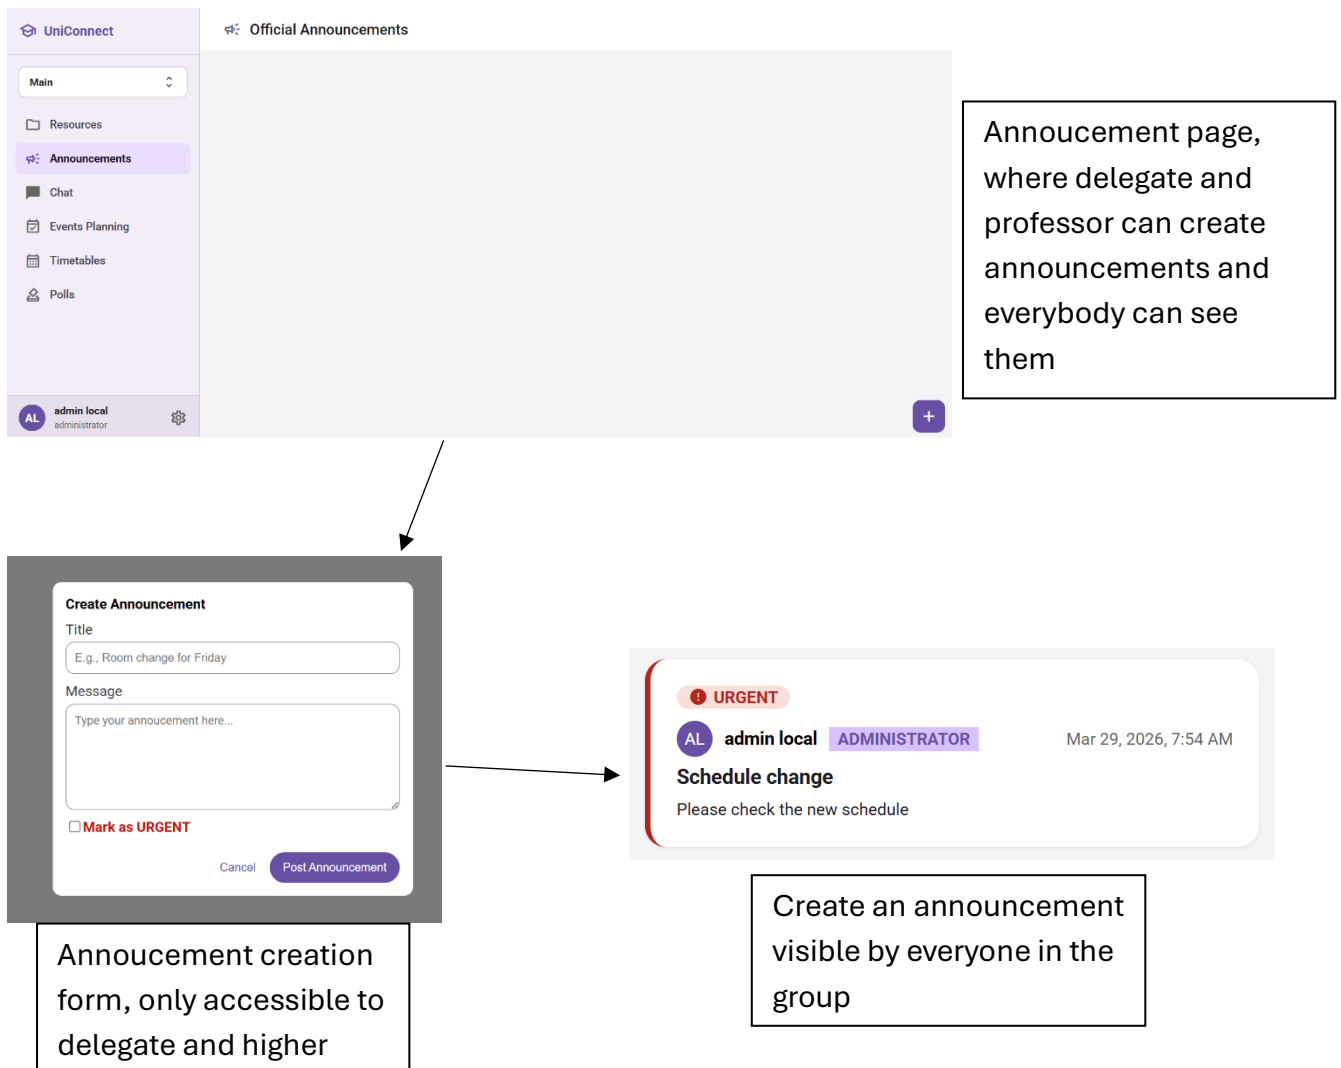

|Type a message in Main...

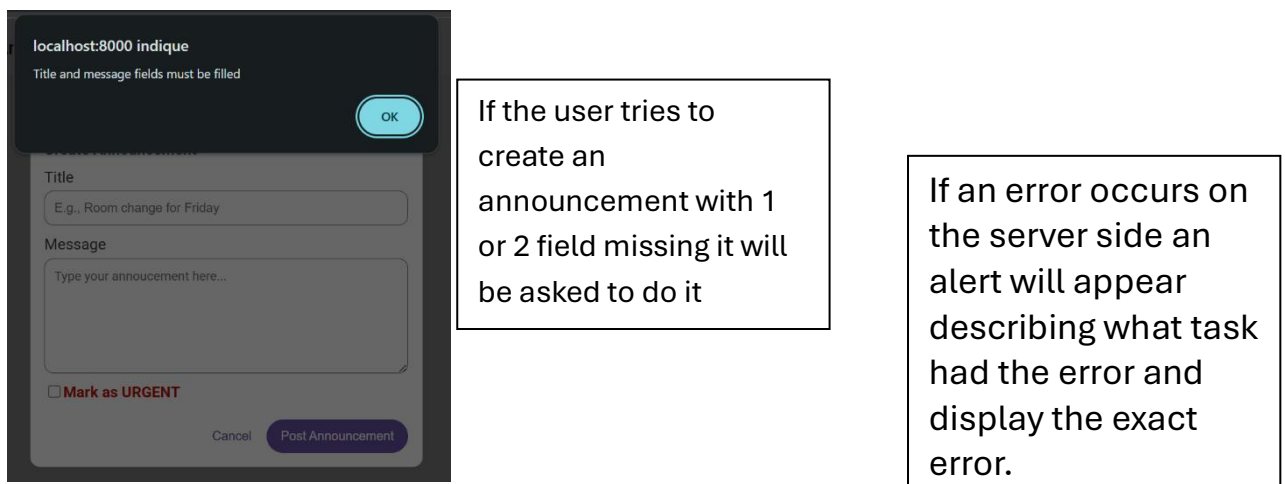

If the user tries to send an empty message the app will not send it

If an error occurs on the server side an alert will appear describing what task had the error and display the exact error.

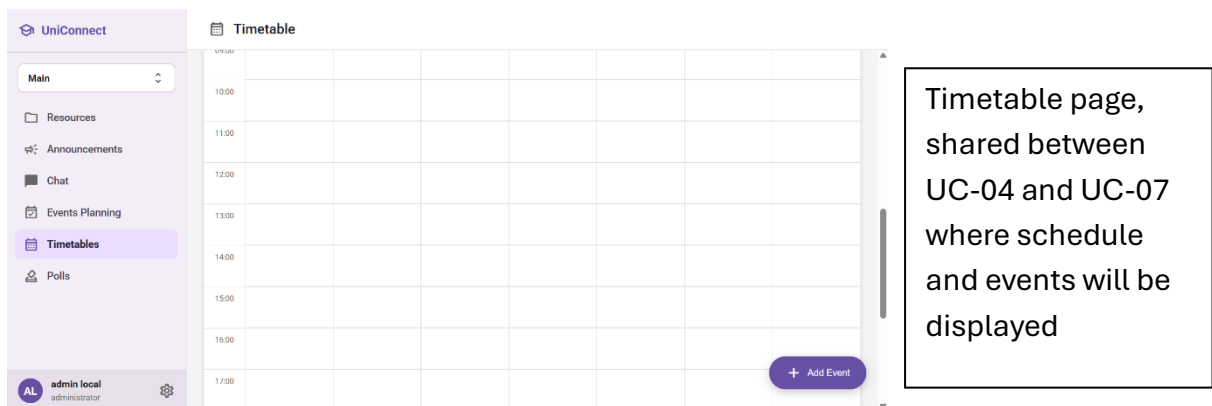

UC-03 Post Official Announcement: Happy path:

Alternative flow:

UC-04 Create Study Event: Happy path:

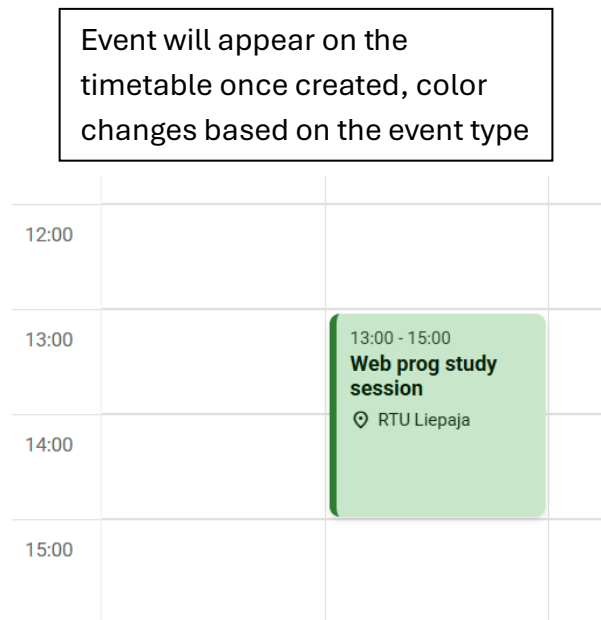

The 'Create an Event' form contains the following fields:

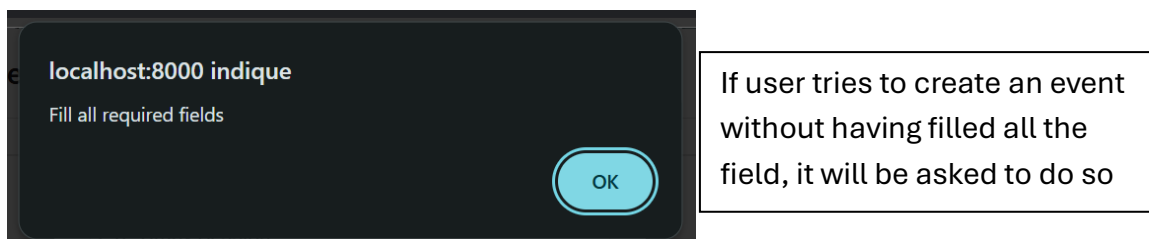

- Title: e.g., Study Session
- Description: Add some details... (optional)
- Location: e.g., Library
- Type: Course (dropdown menu)
- Start: jj/mm/aaaa --:--
- End: jj/mm/aaaa --:--

Buttons: Cancel, Create

Event creation form, all field must be filled

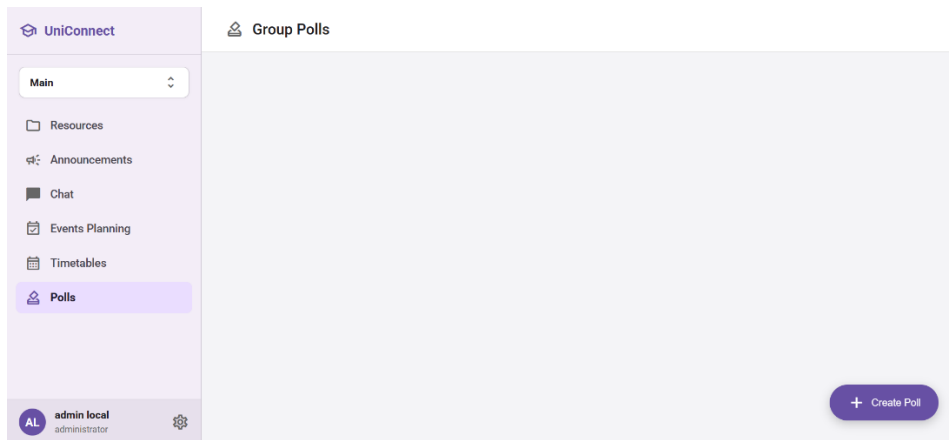

Alternative flow:

If an error occurs on the server side an alert will appear describing what task had the error and display the exact error

UC-05 Vote for Class Delegate: Happy path:

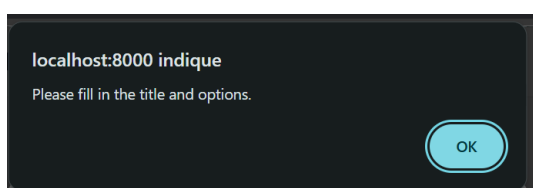

Polls page,
used for
class
election as
well as
regular
polls

Poll creation form, all field must be filled

Poll displayed on the page before user vote

Poll displayed
on the page after
user voted

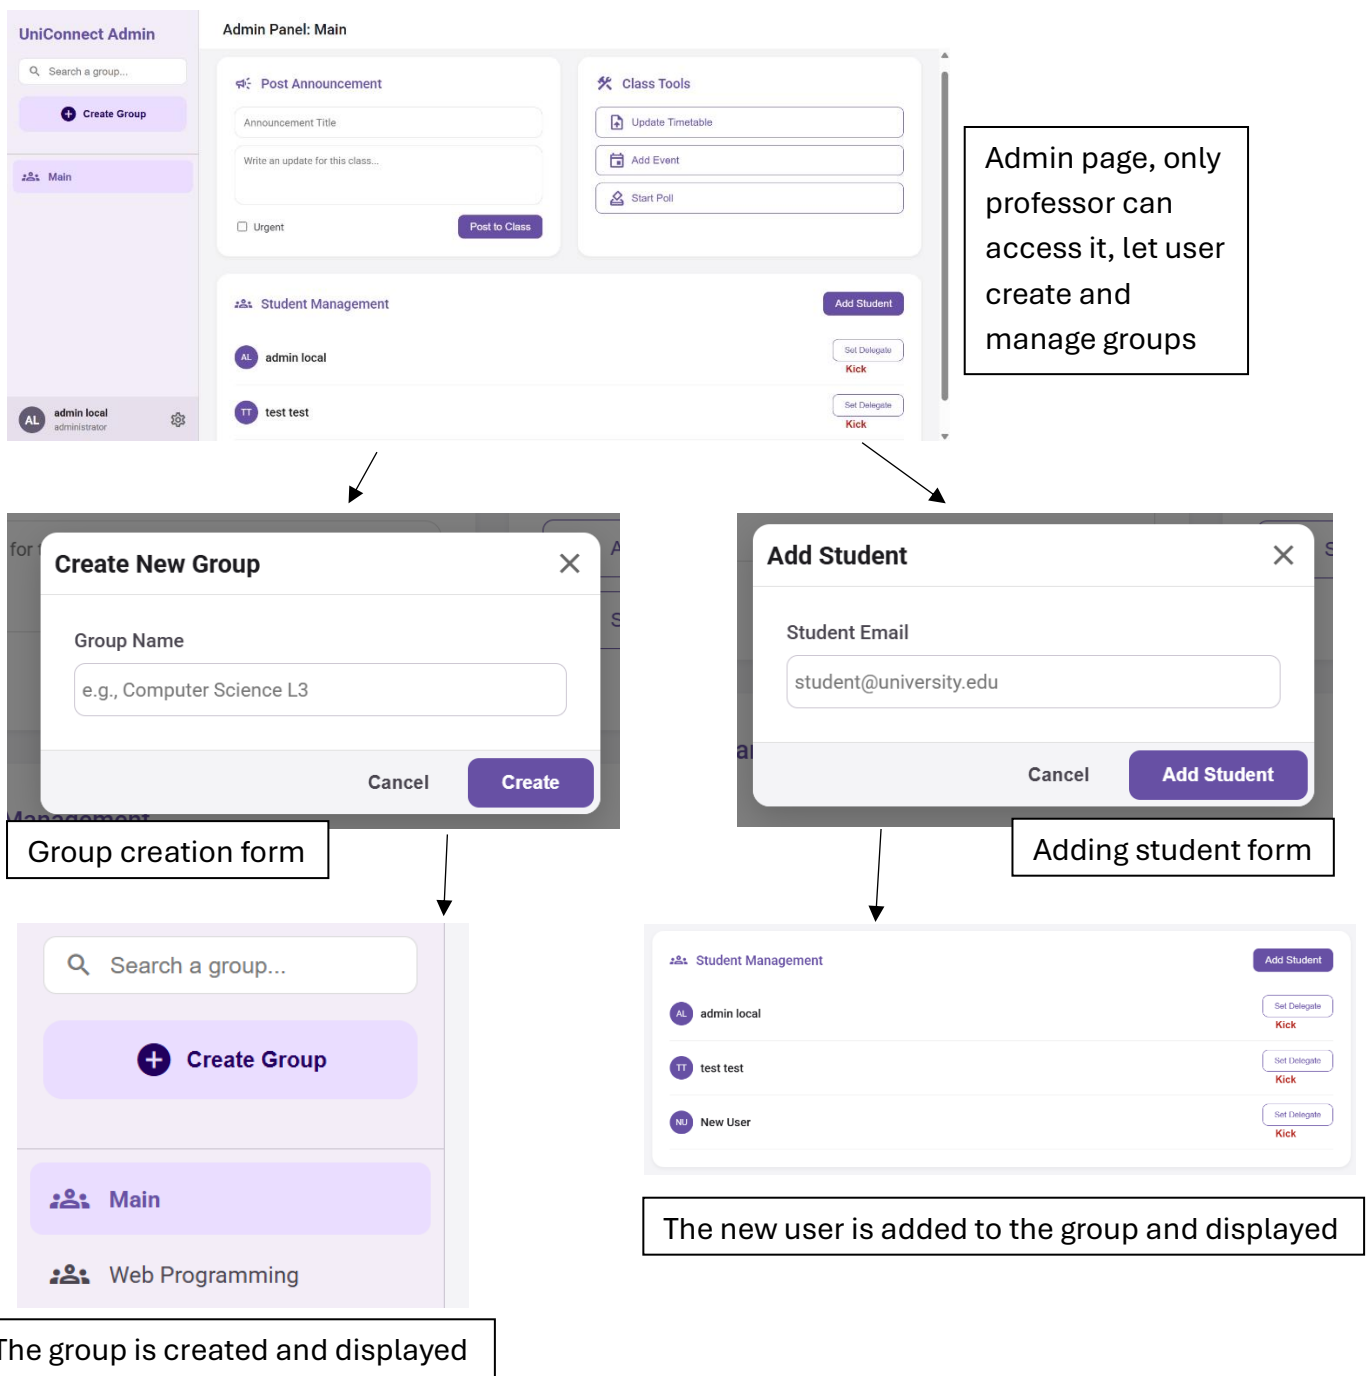

Alternative flow:

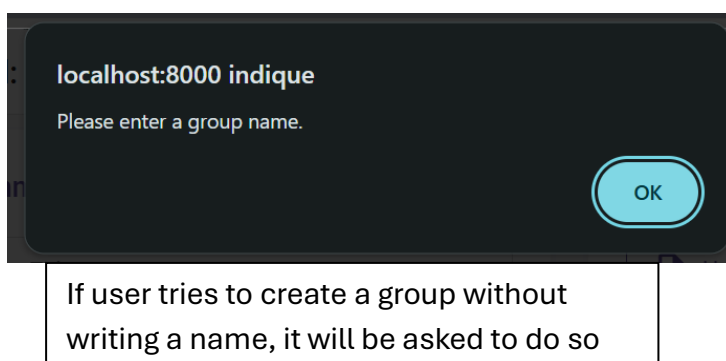

If user tries to create a poll without having filled all the field, it will be asked to do so

If an error occurs on the server side an alert will appear describing what task had the error and display the exact error.

UC-06 Create and Manage Class Group: Happy path:

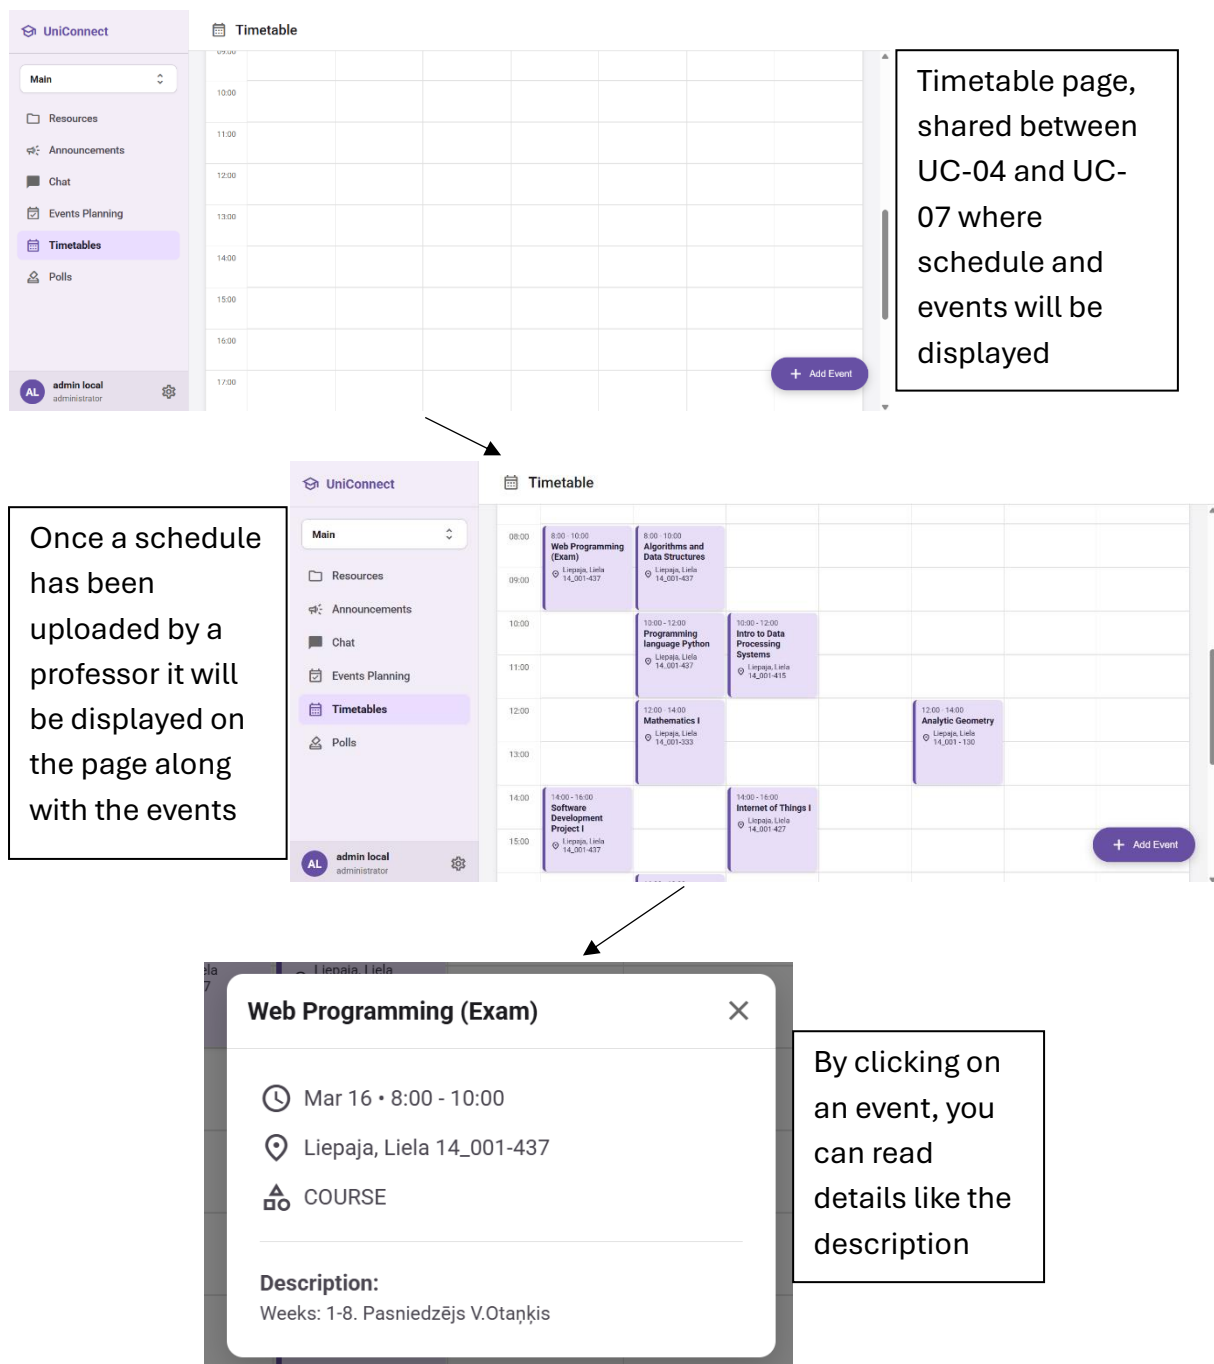

Alternative flow:

If an error occurs on the server side an alert will appear describing what task had the error and display the exact error.

UC-07 View Class Timetable:

Happy path:

Alternative flow:

While there cannot be a user mistake as it is only something to read if an error occurs on the server side an alert will appear describing what task had the error and display the exact error.

Use case verification checklist:

UC-01 Log in to System:

- Valid credentials redirect to the dashboard within 2 seconds. **Pass**
- Invalid credentials show a clear, red error message without page reload. **Pass**

UC-02 Send Class Group Message:

- Message appears in the feed immediately. **Pass**
- Sender's name and timestamp are visible. **Pass**
- User cannot send a message to a class they are not enrolled in. **Pass**

UC-03 Post Official Announcement:

- Only Delegates/Professors see the creation button. **Pass**
- Announcements are visually distinct. **Pass**

UC-04 Create Study Event:

- Event appears in the list tabletab tab. **Pass**
- Location field is mandatory. **Pass**

UC-05 Vote for Class Delegate:

- User can only submit one vote per election. **Pass**
- Voting interface is disabled immediately after submission. **Pass**

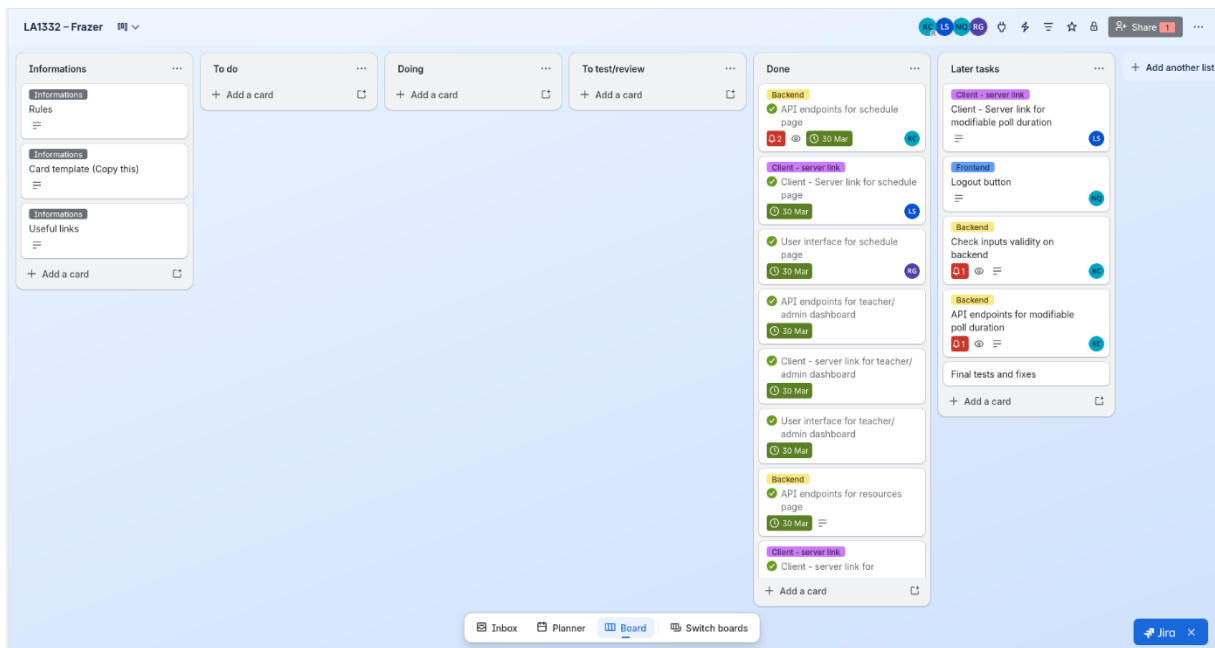

UC-06 Create and Manage Class Group:

- Only Professors can access this feature. **Pass**
- The new group appears immediately in the sidebar. **Pass**

UC-07 View Class Timetable :

- Grid is responsive. **Pass**
- Events do not overlap visually. **Fail**, (Events on the same time period overlap)

Task audit:

Goal: Have all the 7 UC working with only a few bugs

Tasks planned vs Done vs not Done: 19(32 tot)

- Planned: 19
- Done: 18
- Not Done: 1 (Make events not overlap fail)

Defects/gaps:

- Fix events overlapping
 - o Owner: Kristen
 - o DoD: User can distinctly see events on the same time period
- Add a logout button
 - o Owner: Nihad
 - o DoD: User can easily logout by pressing a button
- In app error display
 - o Owner: Rashad
 - o DoD: Errors are displayed on the page and not as alerts
- Check inputs validity on backend
 - o Owner: Kristen
 - o DoD: Server checks input before putting it in the database
- Modifiable poll duration
 - o Owner: Laurick
 - o DoD: User can set the poll duration

Mini-retrospective :

- **What improved since Sprint 2 :**

We completed a lot of the use cases. And we improved some aspects of the already present use cases.

- **What still caused problems :**

- Working on different branches at the same time without merging, this caused our backend to not be up to date on some branches.

- **One process rule for Sprint 4 :**

- Try to finish a feature before working on another

Sprint 4 plan stub:

- **Sprint 4 goal:**

Fully implement all use cases and alternative flow. And fix remaining issues

- **Top 5 tasks planned next:**

- Fix events overlapping
- Add a logout button
- In app error display
- Check inputs validity on backend
- Modifiable poll duration
